

I-TECH UE

Professional device developed to meet physiotherapists needs thanks to its three operating methods: ultrasound therapy (1 MHz - 3 MHz), electrotherapy and combined therapy (ultrasound-electrotherapy).

Combined programs take advantage of the therapeutic effects of both therapies (ultrasound and electrotherapy) providing a high performing device ideal for several therapeutic protocols.

HOW DOES IT WORK

I-TECH UE is a professional device for electrotherapy, ultrasound therapy and combined therapy. Thanks to its free programs I-TECH UE is an ideal device for professional user that can choose between three operating modes (ultrasound therapy, electrotherapy and ultrasound+electrotherapy).

The user can adjust the parameters according to therapeutic needs for each mode. Moreover the combined therapy add the therapeutic effects of ultrasound (thermal, vasodilation and trophic) to electrotherapy analgesic effects.

I-TECH UE constantly informs the user about the correct working status thanks to a flashing led detector (the led turns on when the electrodeskin coupling is correct).
